Field of the Invention The invention relates to a fuel vapor recovery system for a vehicle. More particularly, the invention relates to a fuel vapor recovery system in which fuel vapor generated within an internal combustion engine is brought into contact with an adsorbent, and the fuel vapor adsorbed on the adsorbent is captured, the fuel vapor being stored in a canister in which an adsorbent is accommodated. 2. Description of the Related Art An air conditioning device, an air conditioner system, which is an example of a conventional fuel vapor recovery system, is discussed in, for example, Japanese Patent Application Publication No. 2008-72679. In such an air conditioning device, a canister is disposed under a seat cushion of a vehicle. A canister for storing fuel vapor

manual for design of machinery norton 3e - Machinery Making Project. 01.. to the mechanical design by r l norton and the company design engineer as well as the project / major building area. Make a rough diagram showing the location of the 2 lines (at the same side of the machine) so that the whole picture of the first and third leg of the mechanism can be seen. Problem SOLUTION MANUAL. This invention relates to the making of a novel, one-piece, disposable menstrual absorber pad having an integral container. Disposable menstrual pads are well known and are conventionally made of a fibrous sheet material similar to a tissue paper. Such conventional pads comprise a polymeric support, which may have a number of designs, to which is attached a cover sheet of fibrous material having an absorbent core attached thereto. The pads thus have a panel, which is essentially a two-layered pad element, and the second layer comprises a liquid-
